

# PowerShares Emerging Markets Sovereign Debt Portfolio

P

### As of June 30, 2015

## **Fund Description**

The PowerShares Emerging Markets Sovereign Debt Portfolio is based on the DB Emerging Market USD Liquid Balanced Index. The Fund will normally invest at least 90% of its total assets in securities that comprise the Index. The Index tracks the potential returns of a theoretical portfolio of liquid emerging markets US dollar-denominated government bonds issued by approximately 22 emerging-market countries. The countries in the Index are selected annually pursuant to a proprietary index methodology. The Fund and the Index are rebalanced and reconstituted quarterly.

Returns less than one year are cumulative. Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invescopowershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times. Fund performance reflects fee waivers, absent which, performance data quoted would have been lower.

Alpha, beta and correlation are that of the underlying index.					

A Smart Beta Portfolio

Fund Inception: Oct. 11, 2007

Index returns do not represent Fund returns. An investor cannot invest directly in an index.

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of

the indexes lend securities, and no revenues from securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The JP Morgan Emerging Markets Bond Index Global (JP Morgan EMBI Global) is an unmanaged index that

tracks debt securities of emerging markets.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 100,000 Shares.

## **Leading** the Intelligent ETF Revolution®

## About risk

The Fund's use of a representative sampling approach will result in its holding a smaller number of bonds than are in the underlying Index, and may be subject to greater volatility.

Global bonds are subject to the same risks as other debt issues. Securities of non-U.S. issuers may be subject to greater market volatility based on factors such as availability of reliable financial information, higher transactional costs, taxation, decreased market liquidity and political instability.

The Fund may hold illiquid securities that it may be unable to sell at the preferred time or price and could lose its entire investment in such securities.

There are risks involved with investing in ETFs including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. The Fund is subject to certain other risks. Please see the current prospectus for more information regarding the risk associated with an investment in the Fund.

Fixed-income investments are subject to credit risk of the issuer and the effects of changing interest rates. Interest rate risk refers to the risk that bond prices generally fall as interest rates rise and vice versa. An issuer may be unable to meet interest and/or principal payments, thereby causing its instruments to decrease in value and lowering the issuer's credit rating. Due to anticipated Federal Reserve Board policy changes, there is a risk that interest rates will rise in the near

The Fund is non-diversified and may experience greater volatility than a more diversified investment.

Government obligors in emerging market countries are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial instruments. Issuers of sovereign debt or the governmental authorities that control repayment may be unable or unwilling to repay

principal or interest when due, and the Fund may have limited recourse in the event of default. Without debt holder approval, some governmental debtors may be able to reschedule or restructure their debt payments or declare moratoria on payments.

The Fund will invest in foreign bonds and, because foreign exchanges may be open on days when the Fund does not price its shares, the value of the non-US securities in the Fund's portfolio may change on days when you will not be able to purchase or sell your shares.

Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility, than more diversified investments.

The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. Volatility is the annualized standard deviation of index returns **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude. Alpha is a measure of performance on a risk-adjusted basis. **Credit ratings** are assigned by Nationally Recognized Statistical Rating Organizations based on assessment of the credit worthiness of the underlying bond issuers. The ratings range from AAA (highest) to D (lowest) and are subject to change. Not rated indicates the debtor was not rated, and should not be interpreted as indicating low quality. Futures and other derivatives are not eligible for assigned credit ratings by any NRSRO and are excluded from quality allocations. For more information on rating methodologies, please visit the following NRSRO websites: standardandpoors.com and select
"Understanding Ratings" under Rating Resources
and moodys.com and select "Rating Methodologies"
under Research and Ratings. Average Yield to Worst
is the lowest of all yield to calls or the yield to maturity. Effective Duration is a measure of a bond's sensitivity to interest rate changes that reflects the change in a bond's price given a change in yield.

This duration measure is appropriate for bonds with embedded options. The **30-Day SEC Yield** is based on a 30-day period and is computed by dividing the net investment income per share earned during the Investment income per share earned during the period by the maximum offering price per share on the last day of the period. The **30-Day SEC Unsubsidized Yield** reflects the 30-day yield if the investment adviser were not waiving all or part of its fee or reimbursing the fund for part of its expenses. Total return would have also been lower in the absorpce of those temperature reimbursements or absence of these temporary reimbursements or waivers. Beta is a measure of risk representing how a security is expected to respond to general market movements. **Smart Beta** represents an alternative and selection index based methodology that seeks to outperform a benchmark or reduce portfolio risk, or both. Smart beta funds may underperform cap weighted benchmarks and increase portfolio risk.
