The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance figures assume dividends and distributions were reinvested. Performance data current to the most recent month end may be obtained by visiting CSIMFunds.com.

Since ETFs are baskets of securities that trade on a stock exchange, ETF performance must be shown based on both a Market Price and a Net Asset Value (NAV) basis.

Market Price is the price at which investors buy and sell ETF shares in the stock market. ETF Market Price determines investor returns. An ETF's Market Price may be higher or lower than the NAV at any given point in time.

Market price returns are based upon the midpoint of the bid/ask spread at 4:00 PM Eastern time (when NAV is normally determined for most ETFs), and do not represent the returns you would receive if you traded shares at other times. Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

NAV (Net Asset Value) is a per share valuation of the securities in an ETF officially calculated once per day. NAV price performance is primarily used to evaluate the fund and its managers and may not reflect the actual return for the investor.

FUND CHARACTERISTICS

Number of Securities ²	1,207
Wtd. Avg. Market Capitalization (in millions)	55,087
Portfolio Turnover (1 Year Trailing) ²	4.76%
Price-to-Earnings	18.77
Price-to-Book	1.60
Beta vs. S&P 500 ³	1.11

Price-to-Earnings Ratio (P/E) is the price of a stock divided by its historical earnings per share. A portfolio's P/E is the weighted average of the P/E of all stocks in the portfolio.

Price-to-Book Ratio (P/B) is the market price of a company's stock compared with its most recently reported "book value". A portfolio's P/B is the weighted average of the P/B of all stocks in the portfolio.

Beta is based on the monthly total returns of the Fund and the S&P 500 Index beginning 11/30/09 (first full month following the fund's inception). Beta is a measure of the volatility of a portfolio relative to the S&P 500 Index. A beta of less than one typically indicates lower historical volatility than the index; a beta of more than one typically indicates higher historical volatility than the index.

Unlike mutual funds, shares of ETFs are not individually redeemable directly with the ETF. In addition to the normal risks associated with investing, international investing may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles, or from economic or political instability in other nations. Diversification does not eliminate the risk of market loss.
